WHY CHOOSE US

Six reasons students pick MyCodebud

Not another course library. An ecosystem built so preparation turns into evidence a recruiter actually believes.

01 Real Projects, Not Templates

Novelty-first, portfolio-ready work — never the same copied project every batch turns in.

02 Mentorship From Practitioners

Learn from people who've shipped code and sat on the other side of the interview table.

03 Placement-Aligned DSA

Practice tracks and interview questions built around what companies actually ask.

04 Hackathon Support

Mentor guidance and technical support to compete in national-level hackathons and challenges.

05 ₹99 A Month

High-value career preparation priced so cost is never the reason a student sits out.

06 An Ecosystem, Not A Course

Guidance, mentorship, projects and placement support that work together — not scattered across apps.

ABOUT MYCODEBUD

A career and capability-building ecosystem

MyCodebud exists on one belief: students should graduate with proof of what they can do, not just a stack of certificates. It's built to close the distance between college, skills, practical experience and employability — the gap where most students get stuck between "I learned the syllabus" and "I can do the job."

Every layer of the ecosystem — guidance, mentorship, projects, DSA, interview preparation and hackathons — is designed to produce something a student can point to and say, "I built this." MyCodebud is a subsidiary of Shiktra Technologies LLP, operating as a Udyam Registered, VTU Registered initiative connecting students, colleges and companies inside one ecosystem.

THE PROBLEM

Students learn concepts, collect certificates, and still arrive at interviews without anything real to show for it.

THE FIX

An ecosystem that converts learning into demonstrable capability — not one more course to complete.

THE STRUCTURE

Guidance → Mentorship → Projects
→ DSA → Interview Prep →
Hackathons → Placement Support.

STAGE 01**Learn**

Structured guidance and DSA fundamentals, aligned to what companies expect.

STAGE 02**Build**

Novelty and core projects, reviewed by mentors, not left to guesswork.

STAGE 03**Prove**

Hackathons, mock interviews and Demo Days that turn effort into evidence.

CREDENTIALS VS. PROOF

A certificate says you showed up. A project proves you can build.

The strongest thing a student can carry into an interview isn't a PDF — it's evidence. MyCodebud is positioned entirely around that difference.

A Certificate Says

- ✗ Completed a course
- ✗ Attended a webinar
- ✗ Sat through a syllabus
- ✗ Downloaded a PDF

MyCodebud Says

- ✓ Shipped a working project
- ✓ Solved problems under a mentor's eye
- ✓ Debugged something real, live, on Demo Day
- ✓ Handled a technical interview like a rehearsal

// a certificate is evidence you were present. a project is evidence you can build.

STUDENT DEVELOPMENT ECOSYSTEM

Seven layers, one journey

MyCodebud is built as layers that reinforce each other — a student moves through direction, skill-building and practical exposure until preparation becomes proof.

Students move through guided learning and progressively harder DSA, gaining hands-on exposure to real projects and industry use cases — developing problem-solving skill beyond what a classroom can teach. Research opportunities, mentorship and hackathon support empower them further, while internships and live projects build a portfolio strong enough to carry into placement.

OUR GUIDING PRINCIPLES

What we're building toward

VISION

"To be the ecosystem every Indian engineering student wishes they'd found in year one — where proof of capability, not paperwork, decides who gets the opportunity."

MISSION

"To move students from theory to practical capability through guidance, mentorship, meaningful projects, DSA and interview preparation, and hackathon experience — priced so access is never the barrier."

PROGRAM FLOW

From sign-up to placement

One continuous path — not a menu of disconnected features.

Projects

Never generic, never copied — every brief is written to be novelty-first.

Projects are the centrepiece of MyCodebud. Students work through **core projects** that build fundamentals and **novelty projects** that build a portfolio — with mentor code reviews at every stage, so the finished work is something a student can actually defend in an interview, not just describe.

```
// project brief
type Project = {
  novelty: true,
  copied: false,
  review: "by mentor"
};
```

- ↳ Portfolio-ready builds
- ↳ Novelty-first project briefs
- ↳ Mentor code reviews
- ↳ GitHub-ready documentation
- ↳ A Demo Day to present finished work

DSA & Interview Prep

Practice aligned to what companies actually ask, not a generic problem bank.

Structured DSA tracks sit alongside curated interview questions from top recruiters, so preparation matches real recruitment rounds instead of a random problem set. Weak-topic diagnostics show each student exactly where to focus next — reducing the gap between what students prepare for and what companies actually expect.

```
// mock round result
const topic = "Graphs";
const gap = diagnose(topic);
return gap.focusNext();
```

- ↳ **Structured, topic-wise DSA tracks**
- ↳ **Curated, company-specific question banks**
- ↳ **Timed mock coding rounds**
- ↳ **Weak-topic diagnostics**
- ↳ **Interview-day readiness, not last-minute cramming**

Mentorship

Guidance from people who've done the job, not just taught it.

Every student gets access to mentors with real industry experience — for technical direction, career guidance, and the practical perspective a classroom can't offer. Mentors also lead hackathon teams and run interview simulations, so students hear what to fix before it costs them an offer.

```
// mentorship loop
while (student.growing) {
  mentor.review(student.work);
  student.iterate();
}
```

- ↳ **1:1 and group mentorship**
- ↳ **Career roadmapping**
- ↳ **Mock interviews with real feedback**
- ↳ **Resume and portfolio reviews**
- ↳ **Industry AMAs and practitioner sessions**

WHO GUIDES OUR STUDENTS

Mentors who've done the job, not just taught it

MyCodebud mentors bring real, current industry experience across product companies, IT services, consulting and academia — so the guidance students get is grounded in what employers actually expect.

& many more

// mentor affiliations shown for context on professional background — not endorsements by these organisations

Hackathons

Preparation, pressure-tested in front of judges and mentors.

With mentor-guided teams and real, industry-relevant problem statements, students build under real constraints and pitch to judges — walking away with something no completion certificate can replicate. Experienced professionals join as hackathon mentors to sharpen student thinking and raise the quality of every build.

```
// demo day
const pitch = build(team, prompt);
return judges.evaluate(pitch);
```

- ↳ **Mentor-guided teams**
- ↳ **Real, industry-relevant problem statements**
- ↳ **National-level competition support**
- ↳ **Demo Day pitching practice**
- ↳ **Direct recruiter and mentor visibility**

ONE ECOSYSTEM, THREE SIDES

Students. Colleges. Companies.

MyCodebud sits at the centre of a three-sided ecosystem — connecting all three without asking companies to pay for access.

Students

Need opportunities, guidance, and proof they can show a recruiter.

MYCODEBUD

Colleges

Need stronger placement outcomes and a structured way to keep students industry-ready.

Companies

Need access to filtered, capability-tested talent — free of cost, without building a pipeline themselves.

AFFORDABLE BY DESIGN

One price. The full ecosystem.

No separate paywalls for mentorship, projects or interview prep — every plan includes the entire ecosystem.

MONTHLY

₹99

per student, per month

Guidance & direction

Mentorship access

Core + novelty projects

DSA question bank

ANNUAL

₹1,188

per student, per year — same low monthly rate, paid upfront
